Reviews

This book will not be simple to get going on reading but extremely exciting to read through. Yes, it can be play, still an interesting and amazing literature. I am very easily could possibly get a delight of reading a written book.

So well did this arrangement work, that Dr. Becker, favoured by the unusually fine summer, by remaining on the hill every night succeeded in recording no fewer than forty-eight sunsets or sunrises in the months of June and July. The observations are the more valuable, as about the beginning of August heavy rains set in, and the weather in general was so unfavourable that only two sunrises, and not a single sunset, were observable in that month. Nor did the skies improve much before the end of the year, for in the last ten weeks there were but five nights on which nebulae could be observed in the meridian, while the fifteen first weeks of the year yielded seventeen nights suitable for that class of work. As at present arranged, the low-sun apparatus can only be conveniently used when the sun is north of the equator, but eventually it is hoped that some typical parts of the spectrum can be observed in the middle of winter. Last year s work was intentionally kept almost entirely between wave-lengths 516.5 and 604mm. Within these limits upwards of 13,000 observations have been made, and for them the normal lines are all reduced. 4,500 records of lines have been reduced to the final wave-lengths on the basis of Prof. H. A. Rowland s paper On the Relative Wavelength of the Lines of the Solar Spectrum, in the Amer....
