Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1903 Excerpt: .rises into short, thick, angular, rather flat-topped columns, slowly increasing in thickness as they rise, and with smooth flattened sides. The living layer descends to various depths, from 5-6 cm., sometimes even reaching 9 cm. The calicles on the flattened, slightly convex and irregularly wavy top (fig. 2), are all of the same pattern, some 3 mm. across, 2-3 mm. deep, conical, crowded, but all as if breaking through an extremely friable, ragged, laminate reticulum. The walls are thin and membranous, very porous, with large openings, and, consequently, frequently incomplete at the edges; they are hardly conspicuous enough to show any definite zigzag or straight course of their own. The laminate septa form the chief element in the walls, and are so incised and porous as to appear quite ragged, while the obscuration of their radial symmetry adds to this effect. They begin to project in irregular numbers just below the margin, but their deeply incised edges merely send sharp or forking tongues into the fossa, which there twist and bend about, meeting and fusing deep down in the calicle. The calicles at the sides have a very different character (fig. 3), which reaches a climax on the lowest strips of the living layer, where they are frequently 5 mm. across, almost flush with the surface. The septa are rows of granules, which run over the broad flat walls, striating them transversely. The typical septal formula may be here obscured by there being as many as...
